

<https://getbootstrap.com/docs/5.3/getting-started/introduction/>

Name 5 different Bootstrap components and describe how they work.

1. Breadcrumbs provide information showing where you are within the pages like a file system.
2. Accordions are containers that expand and collapse vertically with multiple items/content. Similar to the center of the musical instrument in function.
3. Dropdowns are used to create a dropdown menu with multiple options to choose from depending on app.
4. Navbars help users navigate to different areas of the site/app.
5. Carousels are used to display content in a slideshow like form. They can be set up to cycle on interaction or automatically.

How does the Bootstrap grid system work?

Bootstrap grid allows you 12 columns per row to style however you'd like. It includes breakpoints that will adjust content according to screen size for nice responsive web design.

What is a highlight of what you have learned this week?

The highlight for me was learning that there are libraries of css and javascript files that make styling more accessible.
